

Sept 23, 2020

Hi Warren,

Thanks for the samples. I looked through the organic matter samples. They had the distinct odor of cyano. There were lots of resting cells from Dolichospermum. There were also some benthic Anabaena, Lyngbya, Oscillatoria, picoplankton, Gomphasphaeria. Many diatoms and organic matter too but all of these cyano were quite abundant in the samples.

It will take me more time to get the other ones looked at, but I'll let you know when I have updates.

Happy Fall,  
Amanda
